Is Regression:	No				
Sprint Focus:					
Subject:	Fatal Error if Ressource could not be found				
Description					
<p>Hi there</p> <p>If there is a image in a RTE field which could not be found, i get a fatal error (#1314516809). The solution should be, that everything else except the image would be parsed.</p> <p>This is specifically the case, if files with special characters (umlaute) are present. => in that case the file path is urlencoded and as such not present in the underlying file system</p> <p>Anyhow, the parse func should account for that case and</p> <ol style="list-style-type: none">1) urldecode the paths2) not throw a fatal error, but catch it and ignore the image <p>Kind regards Manuel</p>

When does the error occur? While editing in the RTE or at the time of rendering in the frontend? Where is this fatal error raised?

I am not able to reproduce this issue with current master. The file name is encoded but the image is rendered.

I am not able to reproduce this issue in TYPO3 CMS 6.2.7 either.

#4 - 2015-01-15 22:08 - Stanislas Rolland

- Target version deleted (next-patchlevel)

#5 - 2015-06-03 10:34 - Manuel Bloch

Thanks for your answer.

I can also not reproduce this in the current Master.

How ever, i saw that there are other, related issues to this problem

#6 - 2015-07-17 17:48 - Benjamin Mack

- Status changed from Needs Feedback to Closed

This is fixed with 7 now. Thanks for the report!
