#1 - 2014-11-19 19:05 - Eckard Gehrke

Hi,

just checked with bootstrap package and I get the same problems there. It said it installed but then I get no page tree. In the log file I see the following errors:

Core: Error handler (BE): PHP Warning: array_merge(): Argument #1 is not an array in
C:\xampp\xampp1834_VC11\htdocs\typo3\typo3\sysext\core\Classes\DataHandling\DataHandler.php line 1451

Attempt to insert record on page '[root-level]' (0) where this table, sys_template, is not allowed (msg#1.1.11)

Core: Error handler (BE): PHP Warning: reset() expects parameter 1 to be array, null given in
C:\xampp\xampp1834_VC11\htdocs\typo3\typo3\sysext\impexp\Classes\Utility\ImportExportUtility.php line 52

Core: Error handler (BE): PHP Warning:
file_put_contents(C:\xampp\xampp1834_VC11\htdocs\typo3\typo3temp\Cache\Data\cache_classes\546cd5be31ba1.temp): failed to open stream:
Permission denied in C:\xampp\xampp1834_VC11\htdocs\typo3\typo3\sysext\core\Classes\Cache\Backend\SimpleFileBackend.php line 238

After logout and login again I get page error when trying to view Extension Manager -> get preconfigured distribution.

I get http 500 for calling:

Failed to load resource: the server responded with a status of 500 (Internal Server Error)

http://localhost/typo3/typo3/mod.php?M=tools_ExtensionmanagerExtensionmanag...tensionmanager_tools_extensionmanagerextensionmanager%5controller%5D=List

But no new entry at all in typo3 log-file??!!

Is there a way to reset other than installing typo3 completely again?

Best regards
Eckard.

#2 - 2014-12-10 20:02 - Eckard Gehrke

Hi,

I upgraded XAMPP to XAMPP 5630 which now with the new versioning is direct related to php5.6.3.
I upgraded typo3 to 6.2.9 and set to developer mode.

When installing the introduction package I get an Uncaught TYPO3 Exception with the following callstack.
I wonder if that was tested at all under windows environment on any xampp version.

If you have any solution proposal I am willing to try it out and test it on my environment even before you provide an official bugfix.
Even tried on typo3 700 but due to incompatibility with realurl introduction package did not work. Setting compatibility mode to 6.2 via activating the extension didn't work either on the same xampp installation.

Best regards
Eckard.

#3 - 2015-07-09 18:04 - gwenael chailleu

Hi everybody,

I'm looking for an easy way to get a sample typo3 website. Introduction package was a perfect candidate.
But I got exactly the same problem as Eckart.

with a slightly different log (the differences coming from the typo3 version used)

```

15:31:13    typo3@LIVE    [5]    [0]    Core: Error handler (BE): PHP Warning: reset() expects parameter 1 to be array, null given in
/var/www/site_typo3/typo3_src-6.2.13/typo3/sysext/impexp/Classes/Utility/ImportExportUtility.php line 56
    15:31:22    typo3@LIVE    DB    Insert    Attempt to insert record on page '[root-level]' (0) where this table, tt_content, is not allowed
(msg#1.1.11)
    15:31:22    typo3@LIVE    DB    Insert    Attempt to insert record on page '[root-level]' (0) where this table, sys_template, is not allowed
(msg#1.1.11)
    15:31:22    typo3@LIVE    DB    Insert    Attempt to insert record on page '[root-level]' (0) where this table, sys_file_reference, is not
allowed (msg#1.1.11)
    15:30:49    typo3@[ -99]    LOGIN    LOGIN    User typo3 logged in from 78.223.61.143 () (msg#255.1.1)

```

I am using PHP 5.5.26 + typo3_src-6.2.13 + CentOS release 6.6

Since the initial problem has been posted months ago and is still not fixed, it seems that the introduction package is not currently available. Is there another way I could get a similar typo3 demo site ?

Thanks !

Gwen

#4 - 2015-07-10 08:51 - Eckard Gehrke

Hi Gwen,

my problem is in the meantime resolved. I tried it with the 6.2.? on Xampp. Can't tell you anymore the right Typo3 6.2 patchlevel I used. I am now on 7.3 and it works as well. You have not mentioned the DB-version that you are using. You might get some further hints in your DB-log files.

I am on •Apache/2.4.10 (Win32) OpenSSL/1.0.1i PHP/5.6.3
•Server Version: 5.6.21 - MySQL Community Server (GPL)

Best regards
Eckard.

#5 - 2015-07-10 10:17 - gwenael chailleu

Hi Eckard, (and not Eckart, sorry about that ;-)

Thanks for answering. My mysql version is 5.6.24 and I'm using Apache/2.2.15. I see nothing particular in /var/log/mysqld.log (which is the correct log file, I've checked that by restarting mysqld).

There were too patches related to this problem as described in Task #57348.

I'll have a look at them and try to guess why they don't work for me.

Best regards
Gwen

#6 - 2015-07-10 14:47 - gwenael chailleu

Hello,

I've tried the installation on a debian6/PHP 5.6.7-1/Apache 2.4.6/mysql 5.5.31-1.

And It works ! I wont investigate what happened on my CentOS any more, I'd try the installation of the introduction package with typo3 7x on my debian.

Regards
Gwen

#7 - 2015-07-10 15:21 - gwenael chailleu

Hi,

With typo3 7, what I get now is this error : <http://wiki.typo3.org/Exception/CMS/1317178604>

Without any log.

I'll keep the good old 6.2.13.

Regards
Gwen
