

Core APIs - Bug # 46818

Status:	Closed	Priority:	Should have
Author:	Christian Kuhn	Category:	
Created:	2013-03-31	Assigned To:	Francois Suter
Updated:	2013-05-16	Due date:	
Subject:	Cache: New xcache cache backend		
Description			
<div>Core API</div> <div>CachingFramework</div> <div>Backends</div> <div>After "APC Backend"</div> <div>Xcache is an PHP opcode cache similar to APC, the cache can also store in-memory key/value user data.</div> <div>The cache backend implementation is nearly identical to the implementation of APC backend and has the same design constraints.</div> <div>Important: xcache does NOT work in CLI PHP SAPI. The xcache backend implementation is constructed to silently discard any cache operation if in CLI context. That means if Xcache backend is used, it is of no effect in CLI.</div> <div>Furthermore, it is important to set the PHP ini value xcache.var_size to a value (eg. 100M) that is big enough to store the needed data. The usage of this capacity should be monitored.</div>
