

Core - Bug # 56532

Status:	Resolved	Priority:	Should have
Author:	Alexander Opitz	Category:	Extension Manager
Created:	2014-03-04	Assigned To:	Daniel Siepmann
Updated:	2014-03-12	Due date:	
TYPO3 Version:	6.2		
PHP Version:			
Complexity:			
Is Regression:	No		
Sprint Focus:			
Subject:	PackageState.php gets rewritten on every ExtensionManager call (InvalidPackageKeyException)		
Description			
See comment from Ernesto in https://review.typo3.org/#/c/27024/ Mar 4 2:02 PM			
From chat:			
laut debugger läuft er da rein weil er in "registerPackagesFromConfiguration" auf das hier stößt:			
<pre>} catch (\TYPO3\Flow\Package\Exception\InvalidPackageKeyException \$exception) { \$this->unregisterPackageByPackageKey(\$packageKey); continue; }</pre>			
Translation:			
according to debugger it runs into this, because it hits the following in "registerPackagesFromConfiguration":			
<pre>} catch (\TYPO3\Flow\Package\Exception\InvalidPackageKeyException \$exception) { \$this->unregisterPackageByPackageKey(\$packageKey); continue; }</pre>

Revision d24ae450 - 2014-03-12 12:16 - Daniel Siepmann

[BUGFIX] Only valid package names will be processed.

To prevent the extension manager from further steps while invalid package keys exists in the system, the package keys are validated earlier.

This prevents further actions that will lead to rewrite of PackageState.php and invalid opcode cache.

The problem is that all packageKeys are added during testing if new are available. But invalid keys are skipped on write.

So the test for validate package keys should be done even while getting all package keys from file system.
