Sprint Focus:			
Subject:	feuserauth storeSessionData fails to save Data to DB in "ses"-mode		
Description			
<p>If you want to save a users session in an eID script you would call tslib_feUserAuth::storeSessionData()</p> <p>to save the data to the session table.</p> <p>From v4.5.22 to 4.5.23 there appears a new condition in this method:</p> <pre>} elseif (\$this->sessionDataTimestamp === NULL) {</pre> <p>but \$this->sessionDataTimestamp is defined this way: protected \$sessionDataTimestamp; and will never be filled (therefore will never be NULL)</p> <p>And for the "elseif" there is NO "else"-branch. So no error-handling at all, just not working.</p> <p>Note: in 4.7 there IS a "else"-branch (but have not tested 4.7)</p>
