

Logging Project - Task # 48879

Story # 48874 (Resolved): As a developer I want a PSR-3 compatible Logging API

Status:	Closed	Priority:	Could have
Author:	Steffen Müller	Category:	Logging API
Created:	2013-06-05	Assigned To:	
Updated:	2013-07-04	Due date:	
TYPO3 Version:	6.2		
Subject:	PSR-3: Validate reserved array key "exception" in LogRecord->data		
Description			
PSR-3 expects the value type of \TYPO3\CMS\Core\Log\LogRecord->data['exception'] to be of PHP Exception.			
Solution is to validate the given value for LogRecord->data['exception'] and throw an uncaught InvalidArgumentException if the value is not of type \Exception.

Implementors MUST still verify that the 'exception' key is actually an Exception before using it as such, as it MAY contain anything.

This means, fo compliance we do not need to do anything unless we implement a Writer or Processor which evaluates this key as exception
