Power when you need it

Make editing fly

- > [Simple operation](#)
- > [Short learning period](#)
- > [No training required](#)
- > [Intuitive use](#)

You won't need a manual or training to edit content in TYPO3 Neos - because you already know how to do that. It is as easy as clicking onto the part you wish to edit - and start.

TYPO3 Neos' ingenious editing interface lets you focus on your task without you having to jump through hoops because your CMS tells you to do so.

Edit & Preview

Tailor your editing interfaces - and let Preview Central make you see what your users will experience.

Simple, reliable deployment

The ultra-simple in-page editing makes editors center their attention on content.

If you need more, the inspector will be expandable to the full backend screen providing the user with all property options.

That's not enough? Create custom backend modules.

And if even that's not enough, underlying Neos, we have Flow - a first-class web framework which will enable you to build web applications that can be integrated with your other systems.

Neos will blend in seamlessly with your website so you as an editor don't have to re-think in order to edit your content.

It is our philosophy to reduce the amount of cognitive load to make editing content fun again.

Responsive web

Ready for the cloud

Since TYPO3 Flow is cloud-ready, so is TYPO3 Neos. TYPO3 Neos scales with your business and your demands.

You plan an intense marketing campaign?

Simply add as many servers to your environment.

Semantic SEO

Outrun the competition using TYPO3 Neos advanced semantic features. You can annotate your content according to the RDFa standard feeding the search engines additional meta data in order to deliver machine-readable content right away.

Standing on the shoulders of a giant

TYPO3 Neos is the successor of the world-class CMS, TYPO3. We took the experience of more than 500.000 websites built in TYPO3 CMS and used our collective expertise to make a new kind of CMS.

Built on a robust foundation

Being built upon the most advanced PHP framework to date - TYPO3 Flow - makes your websites ready for whatever the future holds for you.

TYPO3 Flow is secure by default, keeping your developers focussed on their main task - building your application - without having to worry about low level implementations.

The „code once - run everywhere“ approach of TYPO3 Flow makes the move from the application to the website very simple.

Whether you start with your website and build the applications from there or you have your application added to it - TYPO3 Neos and TYPO3 Flow have your back.

TYPO3 Neos' ingenious editing interface lets you focus on your task without you having to jump through hoops because your CMS tells you to do so.

[Edit & Preview](#)

Tailor your editing interfaces - and let Preview Central make you see what your users will experience.

Simple, reliable deployment

The ultra-simple in-page editing makes editors center their attention on content.

If you need to edit SEO data next to the content, Neos provides an inspector for that.

If you need more, the inspector will be expandable to the full backend screen providing the user with all property options.

Easily extendable

Websites are as individual as you. Requirements will change during the lifecycle of your product. This is why we put a lot of effort into making TYPO3 Neos as easily extendable as possible.

Utilizing the power of TYPO3 Flow as an application framework makes adding new functionality a breeze.

Responsive web

When you create responsive websites, your CMS should naturally aid you by being responsive as well.

But TYPO3 Neos goes further than that - it will automatically adjust your images for your audiences using progressive enhancement.

Your websites will load faster, feel more fluid and generate a better user experience than websites built with any other CMS on the market.

Since the advanced content editing mechanisms in TYPO3 Neos work together with your website you can change your contents directly within a responsive viewport - getting immediate results and reducing the time of testing your contents on different devices.

Ready for the cloud

Since TYPO3 Flow is cloud-ready, so is TYPO3 Neos. TYPO3 Neos scales with your business and your demands.

You plan an intense marketing campaign?

Simply add as many servers to your environment.

Being built upon the most advanced PHP framework to date - TYPO3 Flow - makes your websites ready for whatever the future holds for you.

TYPO3 Flow is secure by default, keeping your developers focussed on their main task - building your application - without having to worry about low level implementations.

The „code once - run everywhere“ approach of TYPO3 Flow makes the move from the application to the website very simple.

Whether you start with your website and build the applications from there or you have your application and need content management added to it - TYPO3 Neos and TYPO3 Flow have your back.
