TYPO3 Version:	6.2
PHP Version:	5.4
Complexity:	
Is Regression:	No
Sprint Focus:	

Subject:	Content element Media: 1 bug with External URL in 6.2.2: wrong data-value

Description

When using the Media content element
on a fresh new clean installation of 6.2.2 with IntroPack
you will get no visible Video with External URL in no browser.
(Same videos did work up to 6.1.7)

Bug (1)
A video from youtube for example:
http://www.youtube.com/watch?v=ow7eEWh37iU

Video is rendered in 6.2.2 from Media content element with this data in object:
... data="http://www.youtube.com/embed/ow7eEWh37iU?fs=1" ...

Video is rendered in 6.1.7 from Media content element with this data in object:
... data="http://www.youtube.com/v/ow7eEWh37iU?fs=1" ...

If you take the complete object-code
and just change the data-value
from the 6.2.2 version
to the 6.1.7 version
you will see video again in all browsers.

Thanks Markus!

This was a very very fast answer!

Didnt see the dublicate myself.

Did a search with the wrong keywords.
