Subject:	Inline Editable Implementation without surrounding <div>		

Description
I am trying to get a clean output in the frontend for a header: <header> <h1>Foo</h1> </header> Anything insite header should be inline editable. If i want to do this, i always have to wrap the resulting <header> tag of editableViewhelper with an additional div wich represents the content type: {namespace neos=TYPO3\Neos\ViewHelpers} <div{attributes -> f:format.raw()}> {neos:contentElement.editable(property: 'title', tag:'header')} </div> This wrapping div destroys my frontend html structure. what i tried is:{neos:contentElement.editable(property: 'title', tag:'header', node:node)} without the wrapping div wich results in a <header> containing several neos attributes. but still not inline editable. Imho inline editing should be possible without this wrapping div. F.e.:{neos:contentElement.editable(property: 'title', tag:'header')}{neos:contentElement.editable(property: 'title', tag:'div')}{neos:contentElement.editable(property: 'title', tag:'td')}
