Sprint Focus:	

Subject:	Allow mapping of key names

Description

Hello TYPO3 team,

DBAL allows to map tables and fields to aliases. Oracle has a limit of 30 characters in identifiers.
The identifier in this case is table + key, for example:

Table: sys_category_record_mm
Key: uid_foreign_tablenames
Identifier: sys_category_record_mm_uid_foreign_tablenames
Obviously, the identifier exceeds the character limit. It would be nice to allow mapping the keys, otherwise I'm forced to
- shrink the table name to 7 characters
- patch the keys names in sysext/core/ext_tables.sql
