Subject:	Exception when using SQL logger in Production Context

Description

when having the SQL logger active in Prodution context, an exception occur, saying that

> *Uncaught Exception*

Catchable Fatal Error: Argument 4 passed to
TYPO3\FLOW3\Log\LoggerFactory::create() must be of the type array, null
given, called in...

which makes sense, since the mentioned argument 4 is a setting (

[BUGFIX] Fix SQL logging in Production context

The logger factory in Objects.yaml refers to a Setting directive which
with this change is present in Production context. Before, the Settings
could not be found, resulting in a NULL argument where an array is
expected as soon as query logging was enabled in Production.

Some cleanup to logging settings along the way.
