TYPO3.Fluid - Bug # 49038

Status:	New	**Priority:**	Must have
Author:	Axel Brand	**Category:**	
Created:	2013-06-11	**Assigned To:**	
Updated:	2013-06-11	**Due date:**	
Has patch:	No		
Affected Flow version: FLOW3 1.1.0			
Subject:	form.select does not select the first item if prependOptionValue is used		

Description

I habe a strange behaviour.

I use the f:form.select viewhelper like this:
    <f:form.select property="myadata" options="{mydatas}" optionLabelField="name" optionValueField="uid"
    sortByOptionLabel="TRUE" prependOptionLabel="" />

Here the action:

   1. select first item
   2. save object => everything is fine
   3. edit object
   4. first item is NOT selected

If i try this with the second one or if i delete the *prependOptionLabel* attribute, everything is running fine.

I hacked the view-helper-class SelectViewHelper.php like this:

    protected function isSelected($value) {
         $this->getSelectedValue();
        $selectedValue = $this->getSelectedValue();
        if ($value === $selectedValue || (string) $value === $selectedValue) {
           return TRUE;
        }
        if ($this->hasArgument('multiple')) {
          if (is_null($selectedValue) && $this->arguments['selectAllByDefault'] === TRUE) {
             return TRUE;
          } elseif (is_array($selectedValue) && in_array($value, $selectedValue)) {
             return TRUE;
          }
        }
        return FALSE;
     }

The line
    $this->getSelectedValue();

is the trick.
