Subject:	Workflow-simulation fails on new nodes during cleanup task		

Description

The simulation of a deployment fails if the /releases path on the target-node does'nt exist yet and keepReleases is not 0. Since that path would be created by surf during deploy that error should be avoided.

You can workaround that by setting keepReleases to zero during first simulate/deploy but that ist no permanent solution. Another solution is to simply ignore the fail during surf:simulate since surf:deploy works as expected.
