TYPO3.Flow - Bug # 45386

Status:	New	**Priority:**	Could have
Author:	Christian Müller	**Category:**	
Created:	2013-02-11	**Assigned To:**	
Updated:	2013-02-11	**Due date:**	
PHP Version:			
Has patch:	No		
Complexity:			
Affected Flow version: (any)			
Subject:	Package::buildArrayOfClassFiles tries to determine class names from file paths		
Description			

This is a problem if you try to include composer packages that are not namespaced (probably for everything that is not PSR-0 compatible). Because with that a possibly existing folder structure cannot be mapped to namespaces for classes.

If we want to support it (not sure if needed in the long run) we would need a setting per package that switches in a "Extbase" style of determining class names, so instead of converting folders to namespace parts it would create a single class name from the folders separated by underscores. That would work for the simplepie package that I currently try to get working...
