Sprint Focus:	
Subject:	Deprecate TypoScript functions "textStyle" and "tableStyle"

Description

Susanne Moog asked, if it made sense to deprecate the TypoScript functions "textStyle", "tableStyle" and "addParams". I think it does.

   - Most what addParams offers should be done with CSS. Additionally it uses "ugly" values and is incomplete. E.g. it was never possible to manipulate several different html tags at the same time (unless you created an ill nesting of stdWraps, which was not comfortable as well).
   - What textStyle and tableStyle offer should today be done via CSS as well.

For each of them a call to logDeprecatedTyposcript() should be added, e.g. like so:
1$this->logDeprecatedTyposcript('textStyle', 'It will be removed in TYPO3 6.4. Use CSS styles instead.');

[!!!][TASK] Deprecate stdWrap options textStyle, tableStyle

The following stdWrap options are not needed anymore as this can
and should be done with CSS or just normal wraps: * textStyle * tableStyle

Just a question, maybe silly,but...what if someone wants to add a javascript-related "data-stuff" attribute?

For example:

    page.10 = TEXT
    page.10.value = <div>
    page.10.addParams.data-something = true
