TYPO3.Neos - Bug # 10084

Status:	Resolved	**Priority:**	Should have
Author:	Sebastian Kurfuerst	**Category:**	
Created:	2010-10-06	**Assigned To:**	
Updated:	2010-12-10	**Due date:**	
Subject:	Core.Application.js -> initializeModules->Change to event handling		

Description

The method in **Core/Application.js** has a todo comment -- we should use event handling, and get rid of "afterInitializationCallbacks".

```
  /**
   * Invoke the registered modules.
   * @private
   */
  _initializeModules: function() {
     for (var moduleName in this.modules) {
        if (this.modules[moduleName].initialize !== undefined) {
           this.modules[moduleName].initialize(F3.TYPO3.Core.Application);
        }
     }
// TODO Change to event handling
     Ext.each(this.afterInitializationCallbacks, function(c) {
        if (this.modules[c.moduleName]) {
           c.callback.call(c.scope, this.modules[c.moduleName]);
        }
     }, this);
     this.afterInitializationCallbacks = [];
  },
```

Just stumbled over this, it is already done AFAIK.
