TYPO3.Fluid - Feature # 3717

Status:	Resolved	**Priority:**	Should have
Author:	Bastian Waidelich	**Category:**	ViewHelpers
Created:	2009-06-22	**Assigned To:**	Bastian Waidelich
Updated:	2010-10-20	**Due date:**	
Has patch:			
Subject:	"Designators" for Form view helper		

Description

- FormViewHelper needs a new argument "designator" / "namespace"
- Extbase will set the default value for this argument to "tx_extensionname_pluginname"
- All Form view helpers inside a form will inherit this namespace

so:

```
<f:form>
  <f:form.textbox name="firstName" />
</f:form>
```

gets

```
<form action="...">
  <input type="text" name="tx_extensionname_pluginname[firstName]" value="" />
</form>
```

and

```
<f:form object="{customer}">
  <f:form.textbox property="firstName" />
  <f:form.textbox name="foo" />
</f:form>
```

gets

```
<form action="...">
  <input type="hidden" name="tx_extensionname_pluginname[customer][uid]" value="123" />
  <input type="text" name="tx_extensionname_pluginname[customer][firstName]" value="Kasper" />
  <input type="text" name="tx_extensionname_pluginname[foo]" value="" />
</form>
```

and finally

```
<f:form object="{customer}" namespace="tx_ttnews">
  <f:form.textbox property="firstName" />
  <f:form.textbox name="foo" />
</f:form>
```

gets

```
<form action="...">
    <input type="hidden" name="tx_ttnews[customer][uid]" value="123" />
    <input type="text" name="tx_ttnews[customer][firstName]" value="Kasper" />
    <input type="text" name="tx_ttnews[foo]" value="" />
</form>
```

Problem: namespace/designator can't be set to "" because then the default value would be used.. So it wouldn't be possible to output:

```
<input type="text" name="id" value="123" />
```

Associated revisions

Revision 35083ea4 - 2009-08-31 19:22 - Bastian Waidelich

[FEATURE] Fluid (ViewHelpers): Added checkbox and radio form viewHelpers. Resolves #3661

[FEATURE] Fluid (ViewHelpers): Added fieldNamePrefix to FormViewHelper as a preparation for namespaced forms. Relates to #3717

[TASK] Fluid (ViewHelpers): Tweaked and refactored FormViewHelper by splitting up the huge render() method into smaller chunks

[TASK] Fluid (ViewHelpers): Refactored form field viewHelpers by splitting AbstractFormViewHelper into AbstractFormViewHelper and AbstractFormFieldViewHelper

[TASK] Fluid (Tests): Streamlined some viewHelper tests and added mock request to ViewHelperBaseTestcase to ease creation of viewHelper unit tests

[TASK] Fluid (Tests): "Forwardported" a unit test from Jochen (in TemplateParserTest)

History

#1 - 2009-08-31 10:06 - Bastian Waidelich

- Assigned To set to Bastian Waidelich

- % Done changed from 0 to 90

#2 - 2009-09-15 16:29 - Bastian Waidelich

- Status changed from New to Resolved

This is already implemented.

In FLOW3 the "designator" is not used by default yet.
