TYPO3.Fluid - Bug # 6570

Status:	Closed	**Priority:**	-- undefined --
Author:	Arno Dudek	**Category:**	
Created:	2010-02-23	**Assigned To:**	
Updated:	2011-05-06	**Due date:**	

Has patch:	
Affected Flow version:	
Subject:	RuntimeException thrown in file ViewHelperVariableContainer.php

Description

No value found for key "F3\Fluid\ViewHelpers\FormViewHelper->formObject"

44 F3\Fluid\Core\ViewHelper\ViewHelperVariableContainer::get("F3\Fluid\ViewHelpers\FormViewHelper", "formObject")

43 F3\Fluid\ViewHelpers\Form\AbstractFormFieldViewHelper::getPropertyValue()

1 require("/Library/WebServer/htdocs/FLOW3-1.0.0-alpha7/Packages/Framework/FLOW3/Scripts/FLOW3.php")

Hi!

I have nearly the same problem like http://forge.typo3.org/issues/show/4277 and http://forge.typo3.org/issues/show/6004

Error at rendering of forms only at checkboxes:
The upper Exception thrown if the new-action in the controller is like this:

```
    /**
     * Index action
     *
     * @param \F3\AddressBook\Domain\Model\AddressType $newAddressType
     * @return string
     * @dontvalidate $newAddressType
     */
    public function newAddressTypeAction(\F3\AddressBook\Domain\Model\AddressType $newAddressType = NULL) {
        $this->view->assign('newAddressType', $newAddressType);
    }
```

Workaround for this (like http://forge.typo3.org/issues/show/6004):

```
    /**
     * Index action
     *
     * @param \F3\AddressBook\Domain\Model\AddressType $newAddressType
     * @return string
     * @dontvalidate $newAddressType
     */
    public function newAddressTypeAction(\F3\AddressBook\Domain\Model\AddressType $newAddressType = NULL) {
        if ($newAddressType === NULL) {
            $newAddressType = $this->objectFactory->create('F3\AddressBook\Domain\Model\AddressType');
        }
        $this->view->assign('newAddressType', $newAddressType);
    }
```

If this is done, an form error will shown: "Checkbox viewhelpers can only be bound to properties of type boolean or array. Property "default" is of type "NULL"."

The expecting model definitions are:

```
    /**
     * @var boolean
     */
```

```
    protected $default;

    /**
     * Sets default
     *
     * @param integer
     * @return void
     */
    public function setDefault($default) {
        $this->default = $default;
    }

    /**
     * Returns default
     *
     * @return integer
     */
    public function getDefault() {
        return $this->default;
    }
```

workaround

```
    /**
     * Sets default
     *
     * @param integer
     * @return void
     */
    public function setDefault($default) {
        $this->default = (boolean) $default;
    }

    /**
     * Returns default
     *
     * @return integer
     */
    public function getDefault() {
        return (boolean) $this->default;
    }
```

In this case, I'm not sure if this should be this way.

And at least if all is done, the checkbox is checked by default, even than when $this->default is set to false.

History

#1 - 2010-03-11 10:55 - Karsten Dambekalns
